Q. No. 1 – 25 Carry One Mark Each

1. A pin-jointed 2-D truss is loaded with a horizontal force of 15 kN at joint S and another 15 kN vertical force at joint U as shown in figure. Find the force in member RS (in kN) and report your answer taking tension as +ve and compression as –ve

Explanations:

ΣM_V = 0 ⇒ R_v × 8 − 15 × 4 + 15 × 4 = 0 ⇒ R_v = 0
Take moment about V, M_v = 0 ⇒ R_H × 4 = 0 ⇒ R_H = 0
If two members meet at a joint which are not collinear and also there is no external forces acting on that joint then both members will carry zero forces.

∴ F_QV = F_QR = 0

Now, consider joint R, ΣF_y = 0 ⇒ F_{RU} sin 45° = 0 ⇒ F_{RU} = 0
Considering ΣF_x = 0 ⇒ F_{RS} + F_{RU} cos 45° = 0 ⇒ F_{RS} = 0
So, force is member is “RS” will be zero

2. The latitude and departure of a line AB are +78m and –45.1m respectively. The whole circle bearing of the line AB is

(A) 30°  (B) 150°  (C) 210°  (D) 330°

Explanations:
Since the latitude of line is positive and departure is negative, the line lies in Fourth quadrant.

\[
\begin{align*}
\therefore \cos \theta &= 78; \sin \theta &= -45.1 \Rightarrow \tan \theta = -0.578 \Rightarrow \theta = -30^\circ \\
\therefore \text{WCB of AB} &= 360^\circ - 30^\circ = 330^\circ
\end{align*}
\]

3. For two major-roads with divided carriage way crossing at right angle, a full clover leaf interchange with four indirect ramps is provided. Following statements are made on turning movement of vehicles to all direction from both roads. Identity the correct statement
(A) Merging from left is not possible, but diverging to left is possible
(B) Merging from left and diverging to left is possible
(C) Merging from left is possible but diverging is not possible
(D) Neither merging from left nor diverging to left is possible

Explanations:
(B)

4. For subcritical flow in an open channel, the control section for gradually varied flow profile is
(A) at the downstream end
(B) at the upstream end
(C) at the both ends
(D) at any intermediate section

Explanations:
(A)

5. Creep strain is
(A) caused due to dead load only
(B) caused due to live load only
(C) caused due to cyclic load only
(D) independent of load

Explanations:
(A)
6. A water treatment plant, having discharge $1\text{m}^3/\text{sec}$, has 14 filters to treat the water. Each filter is having $50\text{m}^2$ area, but due to backwashing activity, 2 filters are non-operational. Calculate hydraulic loading rate in $\frac{\text{m}^3}{\text{day} \cdot \text{m}^2}$.

Explanations: -

\[
\text{Hydraulic loading rate} = \frac{Q}{A} = \frac{1}{12 \times 50 \text{ sec} \cdot \text{m}^2} = \frac{1 \times 24 \times 60 \times 60}{12 \times 50} \frac{\text{m}^3}{\text{day} \cdot \text{m}^2} = 144 \frac{\text{m}^3}{\text{day} \cdot \text{m}^2}
\]

7. In its natural condition a soil sample has a mass of $1.980 \text{ kg}$ and a volume of $0.001 \text{m}^3$. After being completely dried in an oven, the mass of the sample is $1.800 \text{ kg}$. Specific gravity is 2.7. Unit weight of water is $10 \text{kN} / \text{m}^3$. The degree of saturation of soil is

(A) 0.65  
(B) 0.7  
(C) 0.54  
(D) 0.61

Explanations: -

(C)

\[
\rho = \frac{M}{V} = \frac{1.980}{0.001} = 1980 \text{ kg} / \text{m}^3; \quad \rho_s = \frac{M_s}{V} = \frac{1.800}{0.001} = 1800 \text{ kg} / \text{m}^3
\]

\[
\rho_s = \frac{\rho}{1+w} \Rightarrow 1800 = \frac{1980}{1+w} \Rightarrow w = 0.1
\]

\[
\frac{\rho_G}{1+e} \Rightarrow e = \frac{2.7 \times 1000}{1 + e} \Rightarrow e = 0.5
\]

\[
wG = eS \Rightarrow 0.1 \times 2.7 = 0.5S \Rightarrow S = 0.54
\]

8. Group-I contains dimensionless parameter and Group-II contains ratio

<table>
<thead>
<tr>
<th>Group-I</th>
<th>Group-II</th>
</tr>
</thead>
<tbody>
<tr>
<td>P. Mach number</td>
<td>1. Ratio of inertial force and gravity force</td>
</tr>
<tr>
<td>Q. Reynold number</td>
<td>2. Ratio of fluid velocity and velocity of sound</td>
</tr>
<tr>
<td>R. Weber number</td>
<td>3. Ratio of inertial force and viscous force</td>
</tr>
<tr>
<td>S. Froude number</td>
<td>4. Ratio of inertial force and surface tension force</td>
</tr>
</tbody>
</table>

Correct match of the dimensionless parameter in Group-I with Group-II is

(A) P – 3, Q – 2, R – 4, S – 1  
(B) P – 3, Q – 4, R – 2, S – 1  
(C) P – 2, Q – 3, R – 4, S – 1  
(D) P – 1, Q – 3, R – 2, S – 4

Explanations: -

(C)

9. For a 2-D flow field, the stream function $\psi$ is given as $\psi = \frac{3}{2}(y^2 - x^2)$.

The magnitude of discharge occurring between the stream line passing through points (0, 3) and (3, 4) is

(A) 6 units  
(B) 3 units  
(C) 1.5 units  
(D) 2 units
10. Select the strength parameter of concrete used in design of plain jointed cement pavement from the following choices:
(A) Tensile strength  (B) Compressive strength
(C) Flexural strength  (D) Shear strength

Explanations:-
(C)

11. Four columns of building are to be located within a plot size of $10 \times 10 \text{m}$. The expected load on each column is 400 kN. Allowable bearing capacity of soil deposit is $100 \text{kN/m}^2$. The type of foundation to be used is
(A) Isolated foundation  (B) Raft foundation
(C) Pile foundation   (D) Combined foundation

Explanations:-
(A)

- Load on each column = 400 kN
- Bearing capacity of soil = 100 kN/m$^2$
- Area of each footing required = $\frac{400}{100} \text{m}^2 = 4 \text{m}^2$
- Total area required = $4 \times 4 = 16 \text{m}^2$
- Foundation area = $\frac{16}{100} = 16\%$

If the foundation area is less than 40% of plot area, then isolated foundation is suitable.

12. Following statement are made on compacted soil, where DS stands for soil compaction on Dry Side of OMC and WS stands for soil compacted on Wet Side of OMC. Identify incorrect statement
(A) Soil structure is flocculated on DS and dispersed on WS
(B) Construction of pore water pressure is low on DS and High on WS
(C) Soil on drying, shrinkage is high on DS and Low on WS
(D) On addition to water, swelling is high on DS and low on WS

Explanations:-
(C)

13. It was observed that 150 vehicle crossed a particular location of highway in 30 minutes. Assume that vehicle arrival follow a negative exponential distribution. The number of time headways greater than 5 seconds in above observation is
Explanations:–

Probability of time headway greater than 't sec ' is given by \( p(h \geq t) = e^{-m} \)

If \( v \) = hourly flow rate, then 
\[
\begin{align*}
 m & = \frac{v}{3600} \ t ; \\
 p(h \geq t) & = e^{-\frac{150-2.5}{3600}} = 0.659254
\end{align*}
\]

\[
\frac{\text{No. of time headway greater than 't' sec}}{\text{No of observed time headway}} \times p(h \geq t) = 150 \times 0.65924 = 98.88
\]

14. As per IS 800: 2007 the cross-section in which extreme fibre can reach the yield stress but cannot develop the plastic moment of resistance due to local buckling is classified as

(A) Plastic section  (B) Compact section  
(C) Semi compact section  (D) Shear section

Explanations:–

(C)

As per clause 3.7.2 of IS 800:2007

15. The “Plane section remain plane” assumption in bending theory implies

(A) Strain profile is linear  
(B) Stress profile is linear  
(C) Both profiles are linear  
(D) Shear deformation is neglected

Explanations:–

(A)

16. The ratio \( N_i / N_d \) is known as shape-factor where \( N_i \) is the number of flow channels and \( N_d \) is the equipotential drop. The flownet always drawn with a constant b/ a ratio where b and a are distance between two consecutive flow lines and equipotential lines respectively. Assuming that b/a ratio remains same, the shape factor of a flow net will change if the

(A) Upstream and downstream heads are interchanged  
(B) Soil in the flow space is changed  
(C) Dimension of the flow space are changed  
(D) Head difference causing the flow is changed

Explanations:–

(B)

17. Match the given water properties in Group-I to the given titrants shown in Group-II

<table>
<thead>
<tr>

</tbody>
</table>

(A) P – 1, Q – 2, R – 3, S – 4  
(B) P – 2, Q – 1, R – 4, S – 3  
(C) P – 3, Q – 4, R – 1, S – 2  
(D) P – 4, Q – 3, R – 2, S – 1

Explanations:–

(C)
18. Two steel column P (length L and yield strength $f_y = 250 \text{MPa}$) and Q (length 2L and yield strength $f_y = 500 \text{MPa}$) have the same cross-section and end condition. The ratio of buckling load of column P to that of column Q is

(A) 0.5  (B) 1.0  (C) 2.0  (D) 4.0

Explanations:-

(D)

Buckling load, $P = \frac{\pi^2 EI}{(l_{eff})^2}$ \Rightarrow $P_p = \frac{\pi^2 EI}{(L)^2}$, $P_Q = \frac{\pi^2 EI}{(2L)^2}$; \quad $\frac{P_p}{P_Q} = 4$

19. As per IS 456 : 2000, bond strength of concrete $\tau_{bd} = 1.2$ for M20. It is increased by 60% for HYSD bar. The development length $L_d$ in terms of $\phi$ is

$\phi \sigma_{st} = 360 \text{ MPa}$

Explanations:-

$L_d = \frac{\phi \sigma_{st}}{4\tau_{bd}} = \frac{\phi \times 360}{4 \times 1.2 \times 1.60} = 46.875\phi$

20. A 1 hour rainfall of 10 cm has return period of 50 year. The probability that 1 hour of rainfall 10 cm or more will occur in each of two successive years is

(A) 0.04  (B) 0.2  (C) 0.2  (D) 0.0004

Explanations:-

(D)

Return period of rainfall, $T = 50$ years

∴ Probability of occurrence once in 50 years, $p = \frac{1}{50} = 0.02$

Probability of occurrence in each of 2 successive years

$= p^2 = (0.02)^2 = 0.0004$

21. A symmetric I-section (with width of each flange = 50 mm, thickness of web = 10 mm) of steel is subjected to a shear force of 100 kN. Find the magnitude of the shear stress (in N/mm$^2$) in the web at its junction with the top flange

Explanations:-

$I = \frac{50 \times 120^4}{12} - \frac{40 \times 100^3}{12} = 3.866 \times 10^6 \text{ mm}^4$

$q = \frac{SAy}{Ib} = \frac{100 \times 10^3 \times 50 \times 10 \times 55}{3.866 \times 10^6 \times 10} \approx 71.12 \text{N/mm}^2$
22. Maximum possible value of compaction factor for fresh (green) concrete is
   (A) 0.5    (B) 1.0    (C) 1.5    (D) 2.0

   Explanations:-
   (B)

23. In a setting chamber, what is the minimum dimension of particle which can be completely removed, if rate of overflow is 30m³/d/m². Take G = 2.65; \( \mu = 1 \times 10^{-5} \)Ns/m²
   (A) 0.001mm  (B) 0.002mm  (C) 0.003mm  (D) 0.004mm

   Explanations:-
   (B)

   \[ v = \frac{9\rho}{18\mu} (G - 1)d^2 \]
   \[ = \frac{30 \text{m}^3}{d/\text{m}^2} = \frac{30}{24 \times 60 \times 60} \text{m/s} = 3.472 \times 10^{-4} \]
   \[ 3.472 \times 10^{-4} = \frac{9.81 \times 1000}{18 \times 10^{-5}} \times 1.65 \times d^2 \Rightarrow d^2 = 3.86 \times 10^{-12} \Rightarrow d = 0.002 \text{mm} \]

24. An isohyet is a line joining points of
   (A) Equal temperature  (B) Equal humidity  
   (C) Equal rainfall depth  (D) Equal evaporation

   Explanations:-
   (C)

25. If \(|4x - 7| = 5\) then the value of \(2|x| - |x|\) is
   (A) 2, \(\frac{1}{3}\)  (B) \(\frac{1}{2}, 3\)  (C) \(\frac{2}{3}, \frac{1}{3}\)  (D) \(\frac{2}{9}, \frac{1}{3}\)

   Explanations:-
   (B)

   \(|4x - 7| = 5; 4x - 7 = 5 \text{ or } 4x - 7 = -5 \Rightarrow x = 3 \text{ or } 0.5 \)
   \[ 
   . \ :
   2|x| - |x| = 2 \times 3 - 3 = 3 \text{ or } 2 |x| - |x| = 2 \times \frac{1}{2} - \frac{1}{2} = \frac{1}{2} \]

   Q. No. 26 – 55 Carry Two Marks Each

26. A rectangular concrete beam 250 mm wide and 600 mm deep is prestressed by means of 16 wire of high tensile steel wires, each of 7 mm diameter located at 200 mm from the bottom face of the beam at a given section. If the effective pre-stress in the wires is 700 MPa, what is the maximum sagging B.M (in kN-m) due to live load which this section of the beam can withstand without causing tensile stresses at the bottom face of the beam. Neglect the self weight of the beam.
Explanations:

Since the tensile stress at bottom face of the beam is zero,

\[
\frac{P}{A} - \frac{M}{I} \gamma + \frac{P_{e}}{I} \gamma = 0
\]

\[
P = 700 \times \frac{\pi}{4} (7)^{2} \times 16 = 431.0265 \times 10^{3} N \Rightarrow \frac{P}{A} - \frac{M}{Z} + \frac{P_{e}}{Z} = 0
\]

Since the prestressing force is located at 200 mm from the bottom face of the beam. Eccentricity = \(300 - 200 = 100 \text{mm}\)

\[
\therefore \frac{431.0265 \times 10^{3}}{250 \times 600} - \frac{M \times 6}{250 \times 600} + \frac{431.0265 \times 10^{3} \times 100}{250 \times 600^{2}} \times 6 = 0
\]

\[
\Rightarrow 2.8735 + 2.87351 = 6.66 \times 10^{-8} M \Rightarrow M = 86.205 \text{kNm}
\]

27. In compacted cylindrical bituminous mix,

\[\text{VMA} = 15\% \quad \text{(void mineral aggregate)} \quad ; \quad V_{v} = 4.5\% \quad \text{(air void)}\]

The magnitude of VFB (void filled bituminous) is

(A) 24 \quad (B) 30 \quad (C) 54 \quad (D) 70

Explanations:-

(D)

\[
\text{VFB} = \frac{V_{b}}{V_{v}} = \left(\frac{15 - 4.5}{15}\right) \times 100\% = 70\%
\]

28. The magnitude as the error (correct to two decimal places) in the estimation of integral \[\int_{0}^{4} (x^{4} + 10) \, dx\] using Simpson 1/3 rule is _____. [Take the step length as 1]

Explanations:-

Using Simpson’s Rule

<table>
<thead>
<tr>
<th>X</th>
<th>0</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Y</td>
<td>10</td>
<td>11</td>
<td>26</td>
<td>91</td>
<td>266</td>
</tr>
</tbody>
</table>

\[
\int_{0}^{4} (x^{4} + 10) \, dx = \frac{1}{3} \left[ (10 + 266) + 2(26) + 4(11 + 91) \right] = 245.33
\]
The value of integral, \( \int_0^4 (x^4 + 10) \, dx = \left[ \frac{x^5}{5} + 10x \right]_0^4 = \frac{4^5}{5} + 10 \times 4 = 244.8 \)

\( \therefore \) Magnitude of error \( 245.33 - 244.8 = 0.53 \)

29. The normal depth in a wide rectangular channel is increased by 10%. The percentage increase in discharge in the channel is

(A) 20.1 (B) 15.4 (C) 10.5 (D) 17.2

Explanations:-

(D)

The discharge in the channel is given by

\[ Q = \frac{1}{n} AR^{2/3} S^{1/2} = \frac{1}{n} (By) \left( \frac{By}{B + 2y} \right)^{2/3} S^{1/2} \]

For a wide rectangular channel, \( B \gg y \)

\[ \therefore Q = \frac{1}{n} (By) \left( y^{2/3} \right) S^{1/2} \Rightarrow Q \propto y^{5/3} \]

Let \( Q_1 = k (y)^{5/3} \), then \( Q_2 = k (1.1y)^{5/3} \)

\[ \therefore \frac{Q_2 - Q_1}{Q_1} \times 100 = \frac{(1.1y)^{5/3} - (y)^{5/3}}{(y)^{5/3}} \times 100 = 17.21\% \]

30. Elevation and temperature data for places are tabulated below

<table>
<thead>
<tr>
<th>Elevation 'm'</th>
<th>Temperature °C</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>21.25</td>
</tr>
<tr>
<td>444</td>
<td>15.70</td>
</tr>
</tbody>
</table>

Based on this data, lapse rate can be referred as

(A) Super-adiabatic (B) Sub-adiabatic (C) Neutral (D) Inversion

Explanations:-

(A)

Ambient lapse rate \( = \frac{21.25 - 15.70}{(444 - 4)} \times 1000 = 12.6 \, ^oC \, / \, km \, [\, > \, 9.8 \, ^oC \, / \, km] \)

When the ambient lapse rate exceeds the adiabatic lapse rate, the ambient lapse rate is said to be super adiabatic.

31. 2D stress at a point is given by a matrix,

\[ \begin{bmatrix} \sigma_{xx} & \tau_{xy} \\ \tau_{yx} & \sigma_{yy} \end{bmatrix} = \begin{bmatrix} 100 & 30 \\ 30 & 20 \end{bmatrix} \text{ MPa.} \]

The maximum shear stress in MPa is

(A) 50 (B) 75 (C) 100 (D) 110

Explanations:-
32. Find the value of $\lambda$ such that function $f(x)$ is valid probability density function

$$f(x) = \begin{cases} \lambda(x - 1)(2 - x) & \text{for } 1 \leq x \leq 2 \\ 0 & \text{otherwise} \end{cases}$$

Explanations:

$$\int_{-\infty}^{\infty} f(x) \, dx = 1; \quad f(x) = \begin{cases} \lambda(-x^2 + 3x - 2) & 1 \leq x \leq 2 \\ 0 & \text{otherwise} \end{cases}$$

$$\int \lambda(-x^2 + 3x - 2) \, dx = 1 \Rightarrow \lambda \left[ \frac{-x^3}{3} + 3 \frac{x^2}{2} - 2x \right] = 1$$

$$\Rightarrow \lambda \left[ \frac{8}{3} - \frac{1}{3} \right] + \frac{3}{2} (4 - 1) - 2(2 - 1) = 1 \Rightarrow \lambda \left[ \frac{7}{2} \right] = 1 \Rightarrow \lambda = 6$$

33. The value of $\int_0^{\pi/6} \cos^3 \theta \sin^3 \theta \, d\theta$ is

(A) 0 \hspace{1cm} (B) $\frac{1}{15}$ \hspace{1cm} (C) 1 \hspace{1cm} (D) $\frac{8}{3}$

Explanations:

(B)

$$\int_0^{\pi/6} \cos^3 \theta \sin^3 \theta \, d\theta = \frac{8}{3} \int_0^{\pi/6} \cos^3 \theta \sin^3 \theta \cos \theta \, d\theta \; ; \text{Putting } \sin \theta = t,$$

we get $3 \cos \theta \, d\theta = dt$

$$I = \frac{8}{3} \int_0^{1} (1 - t^2)^{3/2} \, t \, dt = \frac{8}{3} \int_0^{1} (t^6 - 2t^4 + 3t^2) \, t^2 \, dt = \frac{8}{3} \int_0^{1} (t^8 - 3t^5 + 3t^4) \, dt$$

$$I = \frac{8}{3} \left[ \frac{t^9}{9} - \frac{3t^6}{10} + \frac{3t^5}{8} \right]_0^1 = \frac{8}{3} \left[ \frac{1}{9} - \frac{3}{10} + \frac{3}{8} \right] = \frac{8}{3} \left[ \frac{30 - 20 - 60 + 45}{120} \right] = \frac{1}{15}$$

Alternative Method:

Let $3\theta = t; \quad 3 \times d\theta = dt \Rightarrow d\theta = \frac{dt}{3}; \quad \theta = \frac{\pi}{6}, \quad t = \frac{\pi}{2} \; \text{and} \; \theta = 0, t = 0$

$$I = \int_0^{\pi/2} \cos^3 t \cdot \sin^3 t \cdot 2t \cdot \frac{dt}{3} = \frac{1}{3} \int_0^{\pi/2} \cos^3 t \cdot (2 \sin t \cos t)^3 \cdot dt = \frac{8}{3} \int_0^{\pi/2} \cos^3 t \cdot \sin^3 t \cdot \cos^3 t \, dt$$

$$I = \frac{8}{3} \int_0^{\pi/2} \cos^3 t \cdot \sin^3 t \, dt = \frac{8}{3} \left[ \frac{6 \cdot 4 \cdot 2 \cdot 2}{10 \cdot 8 \cdot 6 \cdot 4} \right] = \frac{1}{15}$$
34. Laplace equation for water flow in soil is given by \( \frac{\partial^2 H}{\partial x^2} + \frac{\partial^2 H}{\partial y^2} + \frac{\partial^2 H}{\partial z^2} = 0 \)

Head \( H \) does not vary in \( y \) and \( z \)-direction. Boundary condition

\[ x = 0, \ H = 5 \text{ m}, \ \frac{dH}{dx} = -1. \] What is the value of \( H \) at \( x = 1.2 \)?

**Explanations:**

\[ \frac{\partial^2 H}{\partial x^2} = 0; \] Integrating both sides, we get, \( \frac{dH}{dx} = C_1 \); Integrating again, \( H = C_1 x + C_2 \)

At \( x = 0, \ H = 5 \Rightarrow C_2 = 5 \); At \( x = 0, \ \frac{dH}{dx} = -1 \Rightarrow C_1 = -1 \); \( H = -x + 5 \)

At \( x = 1.2 \text{ m}, \ H = 5 - 1.2 = 3.8 \text{ m} \)

35. A student began an experiment of 5 day 20°C BOD on Monday. Since the 5th day fell on Saturday, the final DO reading was taken on Monday. On calculation BOD (i.e. 7 day 20°C) was found to be 150 mg/L. What would be the 5 day, 20°C BOD (in mg/L)? Assume value of BOD rate constant (\( K \)) at standard temperature of 20°C as 0.23/day (base e).

**Explanations:**

\[ k_0 = 0.434 \times 0.23 = 0.0998 \]

\[ \text{BOD}_7 = L[1 - 10^{-k_0 t}] \Rightarrow 150 = L[1 - 10^{-(0.0998 \times 7)}] \Rightarrow L = 187.54 \text{ mg/L} \]

\[ \text{BOD}_5 = L[1 - 10^{-k_0 t}] = 187.539 \times [1 - 10^{-(0.0998 	imes 5)}] = 128.0979 \text{ mg/L} \]

36. A 2 km pipe of 0.2 m diameter connects two reservoirs. The difference between the water levels in the reservoir is 8 m. The Darcy Weisbach friction factor of the pipe is 0.04. Accounting for frictional entry and exit losses, the velocity in the pipe in (m/sec) is

(A) 0.63 (B) 0.35 (C) 2.52 (D) 1.25

**Explanations:**

(A)

Frictional loss, \( h_f = \frac{f L V^2}{d \times 2g} \); Loss of head at entrance, \( h_e = \frac{0.5 V^2}{2g} \)

Loss at exit of pipe \( h_c = \frac{V^2}{2g} \)

\[ 8 = \frac{f L V^2}{d \times 2g} + \frac{0.5 V^2}{2g} + \frac{V^2}{2g} = 0.04 \times 2000 \times \frac{V^2}{2 \times g \times 0.2} + \frac{V^2}{2g} + \frac{0.5 V^2}{2g} = 20.3873 V^2 + 0.07645 V^2 \]

\[ \Rightarrow V = 0.625 \text{ m/s} \]
37. Bearing of the given system is shown below:

<table>
<thead>
<tr>
<th>Line</th>
<th>Fore bearing</th>
<th>Back bearing</th>
</tr>
</thead>
<tbody>
<tr>
<td>AB</td>
<td>126°45'</td>
<td>308°00'</td>
</tr>
<tr>
<td>BC</td>
<td>45°15'</td>
<td>227°30'</td>
</tr>
<tr>
<td>CD</td>
<td>340°30'</td>
<td>161°45'</td>
</tr>
<tr>
<td>DE</td>
<td>258°30'</td>
<td>78°30'</td>
</tr>
<tr>
<td>EA</td>
<td>216°30'</td>
<td>31°45'</td>
</tr>
</tbody>
</table>

Applying correction due to local attraction, the correct bearing of line BC will be
(A) 48°15'  (B) 50°15'  (C) 49°15'  (D) 48°45'

Explanations:-

(D)
The difference between back bearing and fore bearing of line DE
= 258°30' – 78°30' = 180°
∴ Station D and E are free from local attraction
Fore bearing of line EA = 212°30'
∴ Correct back bearing of line EA = 216°30' – 180° = 36°30'
∴ Error at A = 31°45' – 36°30' = -4°45'; Hence correction at A = -4° 45'
Correct fore bearing of line AB = 126°45' + 4° 45' = 131°30'
Correct back bearing of AB = 131°30 + 180° = 311°30'
∴ Error at B = -3° 30'; Correction at B = +3° 30'
Hence correct bearing of BC = 45°15' + 3° 30' = 48° 45'

38. Two soil profile are used as backfill behind a retaining wall as shown in the figure, where γt is total unit weight and c' & φ' are effective shear parameters. Find the resultant active earth pressure in kN/m

γt = 15 kN/m³  c' = 0, φ' = 30°
γb = 20 kN/m³  c' = 0, φ' = 40°

(A) 31.7  (B) 35.2  (C) 57.8  (D) 57
39. The soil profile above the rock surface at $25^\circ$ infinite slope is shown in figure where $S_u$ is undrain shear stress and $\gamma_t$ is total unit weight. The slip will occur at a depth of

$$\tau \geq S_u \Rightarrow (\gamma_t z_1 + \gamma_t z_2) \sin \beta \cos \beta \geq S_u \Rightarrow \frac{(16 \times 5 + 20 + z_2) \sin 2\beta}{2} \geq S_u$$

$$\Rightarrow \frac{(80 + 20z_2) \sin 50^\circ}{2} \geq 60 \Rightarrow z_2 = 3.83 \text{ m}$$

$$\Rightarrow \text{Depth of slip} = 5 + 3.83 = 8.83 \text{ m}$$

40. A Theodolite is placed at A and a 3 m long vertical staff is held at B. The depression angle made at reading of 2.5m marking on staff is $6^\circ10'$. The horizontal distance between A and B is 2200 m. The height of instrument at A is 1.2 m and reduced level of point A is 880.88 m. Using curvature correction and refraction correction determine the R.L. of point B (in m).
Explanations:-

R.L. of A = 880.88 m

R.L. of Plane of Collimation = 880.88 + 1.2 = 882.08 m

True staff reading at station B = 2.5 – 0.0673 \times 2.2^2 = 2.174 m

Now, B’B” = (\tan 6° 10') \times 2200 = 237.701 m

R.L. of station B = R.L. of Plane of Collimation – True staff reading – B’B”
= 882.08 – 2.174 – 237.701 = 642.205 m

41. A settling tank is designed for a surface overflow rate of \( \frac{30}{\text{day m}^2} \). Assuming specific gravity of sediment particles = 2.65, Density of water, \( r_w = 1000 \text{ kg / m}^3 \), dynamic viscosity of water \( \mu = 0.001 \text{ Ns / m} \) and stokes law is valid.

The approximate minimum size of particles which can be completely removed is
(A) 0.01 mm  (B) 0.02 mm  (C) 0.03 mm  (D) 0.04

Explanations:-
(B)

To calculate minimum size of particles equating settling velocity to overflow rate, we get

\[ V_0 = V_s = \frac{(G_s - 1)\gamma_w d^2}{18 \mu} = \frac{30 \text{ m}^3}{\text{day} \cdot \text{m}^2} = \frac{30}{24 \times 60 \times 60 \text{ s}} = \frac{(2.65 \times 9.81 \times 10^3 \times d^2)}{18 \times 0.001} \]

Solving we get \( d = 1.965 \times 10^{-5} \text{ m} = 0.02 \text{ mm} \)

42. A uniform beam weighing 1800 N is supported at E & F by cable ABCD. Determine the tension force in segment AB at this cable (correct to 1 decimal place). Assume the cable ABCD, BE and CF are weightless
Explanations:-

Taking Moment about A
\[ T_3 = \frac{1800 \times 1.25}{2} = 1125N; \quad T_4 = \frac{1800 \times 0.75}{2} = 675N \]

We get, \( V_A \times 4.5 = (1125 \times 1.5 + 675 \times 3.5) \Rightarrow V_A = 900 \text{ kN} \)
\[ V_A = (1125 + 675 - 900) = 900 \text{ kN} \]
\[ M_{1,\text{beam}} = (V_A \times 1.5) = 900 \times 1.5 = 1350 \text{ Nm} \]
\[ M_{2,\text{beam}} = (V_A \times 3.5 - 1125 \times 2) = (900 \times 3.5 - 2250) = 900 \text{ Nm} \]

Taking bending moment about point (1) [as we know that bending moment at every point in the cable is zero] \( \Rightarrow H_{y_1} = M_{j,\text{beam}} = 1350 \)

Taking bending moment about point (2) \( \Rightarrow H_{y_2} = 900 \Rightarrow H = \frac{900}{1} = 900N \)
\[ 900 y_1 = 1350 \Rightarrow y_1 = \left( \frac{1350}{900} \right) = 1.5 \text{ m} \]
\[ \therefore \theta_1 = \tan^{-1} \left( \frac{y_1}{1.5} \right) = \tan^{-1} \left( \frac{1.5}{1.5} \right) = 45; \quad \theta_2 = \tan^{-1} \left( \frac{y_1 - y_2}{2} \right) = \tan^{-1} \left( \frac{1.5 - 1}{2} \right) = 14.03 \]

From Lamis Theorem
\[ T_1 = \frac{1125}{\sin(90 + \theta_2)} = \frac{1125}{\sin[180 - (\theta_1 + \theta_2)]} \Rightarrow T_1 = \frac{1125 \sin(90 + 14.03)}{\sin[180 - (45 + 14.03)]} = 1272.91N \]

43. A uniform beam (EI = constant) PQ in the form of a quarter circle of radius R is fixed at end P and free at the end Q, where a load W is applied as shown. The vertical downward displacement \( \delta_Q \) at the loaded point Q is given by
\[ \delta_Q = \beta \left( \frac{wR^3}{EI} \right) \]. Find the value of \( \beta \) correct to 4-decimal place.
Explanations:–

\[
U = \int \frac{M^2}{2EI} dx = \int_0^{\theta_2} \left( \frac{WR \sin \theta}{2} \right)^2 \frac{Rd\theta}{2EI} = \int_0^{\theta_2} \frac{P^2R^3 \sin^2 \theta d\theta}{2EI}
\]

\[
= \frac{P^2R^3}{2EI} \left[ \frac{1}{2} \cos \frac{2\theta}{2} \right]_0^\pi = \frac{P^2R^3}{4EI} \left[ \frac{\pi}{2} \right] - \frac{P^2R^3 \pi}{8EI}
\]

\[
\therefore \delta_Q = \frac{\partial U}{\partial W} = \frac{2P^2R^3 \pi}{8EI} = \frac{PR^3 \pi}{4} = \frac{\pi}{4} \left( \frac{WR^3}{EI} \right) \Rightarrow \beta = \frac{\pi}{4} = 0.7854
\]

44. The transplantation of rice requires 10 days and total depth of water required during transplantation is 48 cm. During transplantation there is an effective rainfall (useful for irrigation) of 8 cm. The duty of irrigation water in hectare/ cumec is

(A) 612 (B) 216 (C) 300 (D) 108

Explanations:–

(B)

\[
D = \frac{864 \times 10}{(48 - 8) \times 10} = 216 \text{ hectares / cumec}
\]

45. All members in the rigid-jointed frame shown are prismatic and have the same flexural stiffness EI. Find the magnitude of the B.M. at Q (in kN-m) due to given loading

Explanations:–
Joint | Member | RS | TRS | DF
---|---|---|---|---
TP | \(3\) | \(\frac{1}{4}\) | \(\frac{1}{4}\) | \(\frac{1}{4}\)
T | TS | 0 | I | 0
TR | 0 | \(\frac{1}{4}\) | \(\frac{1}{4}\)
TQ | 0 | \(\frac{1}{2}\) | \(\frac{1}{2}\)

\[ \therefore \quad M_Q = 25 \text{ kNm} \]

46. There are three matrices \(P(4 \times 2), Q(2 \times 4)\) and \(R(4 \times 1)\). The minimum of multiplication required to compute the matrix \(PQR\) is

**Explanations:**
If we multiply \(QR\) first then
\(Q_{2 \times 4} \times R_{(4 \times 1)}\) having multiplication number 8

Therefore \(P_{(4 \times 2)} \times Q_{(2 \times 4)} \times R_{(4 \times 1)}\) will have minimum number of multiplication = \((8 + 8) = 16\)

47. Beam subjected to moving distributed load of 4 kN/m maximum shear force that can occur just to right of \(Q\) is

(A) 30 kN  (B) 40 kN  (C) 45 kN  (D) 55 kN

**Explanations:**
When a cut is made just to the right of \(Q\) and displacements are given such that \(A'B'\) is parallel to \(B'C'\), as \(B'\) is very close to \(Q\), displacement of \(B'\) to the left will be zero and that to the right will be 1.
Hence slope of B'C' = \( \frac{1}{20} \)  \( \Rightarrow \)  Slope of B'A' = \( \frac{1}{20} \times 5 = 0.25 \)

ordinate at A' = \( \frac{1}{20} \times 5 = 0.25 \); ordinate at D' = \( \frac{1}{20} \times 5 = 0.25 \)

If udl is loading span PR, we get maximum SF just to the right of Q

\[ SF = \left( \frac{1}{2} \times 0.25 \times 10 + \frac{1}{2} \times 20 \times 1 \right) \times 4 = 45 \text{ kN} \]

**Common Data Questions: 48 & 49**

For a portion of highway descending gradient 1 in 25 meets an ascending gradient 1 in 20. A valley curve needs to be designed at a velocity of 90 kmph based on

(i) Head light sight distance equal to stopping sight distance of a level terrain.

Consider length of curve > SSD

(ii) Comfort condition if rate of change of acceleration is 0.5 m / s\(^3\)

Reaction time = 2.5 sec, coefficient of longitudinal friction \( \mu = 0.35 \). Height of head light = 0.75 m, and beam angle = 1°

48. What is the length of valley curve as per headlight sight distance?

Explanations:-

\[ N = \left( \frac{1}{25} - \frac{1}{20} \right) = 0.09; \ S = 0.278 \times 90 \times 2.5 + \frac{(90)^2}{254 \times 0.35} \]

\[ = 62.55 + 91.11 = 153.66 \]

Assume L>SSD

\[ L = \frac{NS^2}{(1.50 + 0.0355)} = \frac{0.09(153.6636)^2}{(1.50 + 0.035 \times 153.6636)} = 308.9641 \text{ m} \]

49. What is the length of valley curve (in meter) based on comfort condition?

Explanations:-

\[ L_v = 2 \left[ \frac{NV^2}{C} \right]^{1/2} = 2 \left[ \frac{0.09 \times (0.278 \times 90)^2}{0.5} \right]^{1/2} = 106.066 \text{ m} \]

**Common Data Questions: 50 & 51**

**Storm-I** of duration 5 hours gives a direct run-off of 4 cm and has an average intensity of 2cm / hr

**Storm-II** of 8 hour duration gives a run-off of 8.4 cm.

(Assume \( \phi \)-index is same for both the storms.)
50. The value of index \( \phi \) is 
(A) 1.2 \hspace{1cm} (B) 1.6 \hspace{1cm} (C) 1 \hspace{1cm} (D) 1.4

Explanations:
(A)
\[
\phi \text{ - index } = \frac{2 \times 5 - 4}{5} = \frac{10 - 4}{5} = \frac{6}{5} = 1.2 \text{ cm/hr}
\]

51. Intensity of storm-II in cm/hr is 
(A) 2 \hspace{1cm} (B) 1.5 \hspace{1cm} (C) 1.75 \hspace{1cm} (D) 2.25

Explanations:
(D)
Let intensity of storm-II be \( P \) cm/hr
\[
1.2 = \frac{P \times 8 - 8.4}{8} \Rightarrow 1.2 \times 8 + 8.4 = P \times 8 \Rightarrow P = 2.25 \text{ cm/hr}
\]

Linked Answer Questions: Q.52 to Q.55 Carry Two Marks Each

Statement for Linked Answer Questions: 52 & 53

The magnitude of load \( P \) is increased till collapse and the plastic moment carrying capacity of steel beam section is 90 kNm

52. What is the value of \( R \) (in kN) if value of \( P \) is 80 kN by elastic theory?

Explanations:
Equating deflection at end \( R \)
\[
\text{Let } I = 3 \text{ m}; \quad \frac{R (I)^3}{3EI} = \frac{P (1.5)^3}{3EI} + \frac{P (1.5)^2}{2EI} \times 1.5
\]
\[
\Rightarrow \frac{R (3)^3}{3EI} = \frac{1.125P}{EI} + \frac{1.6875P}{EI} \Rightarrow R = \frac{5}{16}P = \frac{5}{16} \times 80 = 25 \text{ kN}
\]

53. The value of \( R \) (in kN), using plastic analysis is (upto 1 decimal place).

Explanations:
\[
-3M_p\theta + P \frac{l}{2} \theta = 0 \Rightarrow P = \frac{6M_p}{l} = \frac{6 \times 90}{3} = 180 \text{ kN}
\]
At collapse condition \( \Sigma M_k = 0 \)
\[
R \times 3 + M_p - P \times 1.5 - M_p + M_p = 0 \Rightarrow R = 60 \text{ kN}
\]
Statement for Linked Answer Questions: 54 & 55

A multistorey building with a basement is to be constructed. The top 4 m contains loose silt below which dense sand layer is present up to a great depth. Ground water table is at the ground surface. The foundation consists of the basement slab of 6 m width which will rest on the top of dense sand as shown in figure. For dense sand saturated unit weight is $20 \text{kN/m}^3$ and bearing capacity factor, $N_q = 40$, $N_r = 45$, for loose silt saturated unit weight $= 18 \text{kN/m}^3$, $N_q = 15$, $N_r = 20$. Effective cohesion is 0. Neglect depth factor average elastic modulus $E_s$ and Poisson ratio $\mu$ of dense sand is $60 \times 10^3 \text{kN/m}^2$ and 0.3 respectively, using factor of safety $= 3$. (Take influence factor $= 2$)

54. The net safe bearing capacity (in $\text{kN/m}^2$) of foundation is

- (A) 610
- (B) 320
- (C) 980
- (D) 693

Explanations:-

$$q_s = 1.3 C N_r + \gamma' D_r N_q + 0.4 \gamma' N_r; \text{ For given soil, } C = 0$$

Use $N_q = 15$ for loose silt and $N_r = 45$ for dense sand

use term $\gamma = \gamma'$ for loose silt in the term $\gamma'D_r$

$$\therefore \gamma' = 18 - 9.81 = 8.19 \text{ kN/m}^3$$

Use $\gamma = \gamma'$ for dense sand in the term $0.4\gamma B$

$$\gamma' = 20 - 9.81 = 10.19 \text{ kN/m}^3$$

$$\therefore q_u = 8.19 \times 4 \times 15 + 0.4 \times 10.19 \times 6 \times 45 = 1591.92 \text{ kN/m}^3$$

$$q_{nu} = q_u - \gamma'D_r = 1591.92 - 8.19 \times 4 = 1559.16 \text{ kN/m}^3$$

$$\therefore q_{ns} = \frac{q_{nu}}{FOS} = \frac{1559.16}{3} = 519.72$$

$$\therefore q_{safe} = q_{ns} + \gamma'D_r = 519.72 + 8.19 \times 4 = 552.48 \text{ kN/m}^3$$

None of the options is correct

55. The immediate settlement of foundation is

- (A) 58 mm
- (B) 111 mm
- (C) 178 mm
- (D) 126 mm
Explanations:-

\[ S_i = \frac{qB(1-\mu^2)I_i}{E_i} \]

Where \( E_i = 60 \times 10^3 \text{KPa} \)
\( \mu = 0.3 \)
\( I_i = 2 \)
\[ S_i = 552.48 \times 6 \times [1-(0.3)^2]^{\frac{2}{2}} / (60 \times 10^3) = 100.55 \text{ mm} \]

**Section- II (General Aptitude)**

56. Friendship, No matter how ____________ it is, has its limitation

(A) cordial  (B) intimate  (C) secret  (D) pleasant

Explanations:-

(B)

Friendship, No matter how intimate it is, has its limitation. Intimate refers to close personal relations, e.g. an intimate friend. It is also characterized by or involving warm friendship or a personally close or familiar association or feeling.

57. A number much greater than 75 and smaller than 117 is

(A) 91  (B) 93  (C) 89  (D) 96

Explanations:-

(D)

58. The pair that best express a relationship similar to that expression in the pair:

**Medicine: Health**

(A) Science: Experiment  (B) Wealth: Peace
(C) Education: Knowledge  (D) Money: Happiness

Explanations:-

(C)

Medicine leads to good health. Similarly, Education leads to Knowledge. Science does not lead to experiment. Wealth may not necessarily lead to peace. Also money may not also lead to happiness all the time.

59. Which of the following options is closest in meaning to the word given below?

“Primeval”

(A) Modern  (B) Historic  (C) Primitive  (D) Antique

Explanations:-

(C)

Primeval pertains to the first age or ages, especially of the world. E.g.: primeval forms of life
60. A reduction of 5% in price of sugar enables a housewife to buy 3 kg more for Rs.280. Find the reduced price

Explanations:-
Let the original price be Rs. x/kg

Number of kgs that can be bought = \frac{280}{x}

Number of kgs that can be bought after reduction in price = \frac{280}{0.95x}

⇒ \frac{280}{0.95x} - \frac{280}{x} = 3
⇒ x = \frac{280}{0.95} - \frac{280}{x} \times \frac{1}{3}
⇒ Reduced price = 0.95x = Rs.4.667 / kg

61. x and y are two positive real numbers, such that equation

\[ 2x + y \leq 6; \ x + 2y \leq 8 \]

For which values of (x, y), the function \( f(x,y) = 3x + 6y \) will give maximum value

(A) 4 / 3, 10 / 3  
(B) 8 / 3, 20 / 3  
(C) 8 / 3, 10 / 3  
(D) 4 / 3, 20 / 3

Explanations:-

(A)

\[ 2x + y \leq 6; \ x + 2y \leq 8 \]

\[ x \leq 1.33; \ y \leq 3.33; \]  
Option (B) and (C) is rejected because \( x \times 1.33 \)

Option (D) is rejected \( x \times 10 / 3 \)

62. A firm is selling its product at Rs. 60/unit. The total cost of production is Rs. 100 and firm is earning total profit of Rs. 500. Later, the total cost increased by 30%. By what percentage the price should be increased to maintain the same profit level

(A) 5  
(B) 15  
(C) 10  
(D) 30

Explanations:-

(A)

63. Abhishek is elder to Savan, Savan is younger to Anshul. The correct relations is

(A) Abhishek is elder to Anshul 
(B) Anshul is elder to Abhishek 
(C) Abhishek and Anshul are of same age 
(D) No conclusion can be drawn

Explanations:-

(D)
64. The table gives the expenditure by a company in year 2010 and 2011.

<table>
<thead>
<tr>
<th>Item</th>
<th>2010</th>
<th>2011</th>
</tr>
</thead>
<tbody>
<tr>
<td>Raw material</td>
<td>5200</td>
<td>6240</td>
</tr>
<tr>
<td>Power &amp; fuel</td>
<td>7000</td>
<td>9450</td>
</tr>
<tr>
<td>Salary &amp; wages</td>
<td>9000</td>
<td>12600</td>
</tr>
<tr>
<td>Plants &amp; machinery</td>
<td>20000</td>
<td>25000</td>
</tr>
<tr>
<td>Advertising</td>
<td>15000</td>
<td>19500</td>

<tr>
<td>Research &amp; development</td>
<td>22000</td>
<td>26400</td>
</tr>
</tbody>
</table>

Which one of the following increased by same percentage in year 2010-2011?

(A) Raw material and salary and wages
(B) Salary and wages and advertising
(C) Power and fuel and advertising
(D) Raw material and research and development

Explanations:

(D)

% increase in raw material = \( \frac{6240 - 5200}{5200} \times 100 = 20\% \)

% increase research and development = \( \frac{26400 - 22000}{22000} \times 100 = 20\% \)

65. The professor ordered to the student to go out of the class

(I) The professor ordered to
(II) the student to go
(III) out of the class
(IV) The incorrect one is

The incorrect one is

(A) (I) (B) (II) (C) (III) (D) (IV)

Explanations:

(B)
