# IES-2011- Paper-II

| I. | Consider the following statements:  |   |                             |                                |  |  |  |  |
|----|---|---|-----------------------------|--------------------------------|--|--|--|--|
|    | (1) A Schmitt trigger circuit can be emitter-coupled bi-stable circuit.   |   |                             |                                |  |  |  |  |
|    | (2) Schmitt trigger circuit exhibits hysteresis phenomenon.   |   |                             |                                |  |  |  |  |
|    | (3) The output of a   | Schmitt trigger will be tri                             | angular if the input is sq  | uare wave.                     |  |  |  |  |
|    | Which of these state  | ments are correct?                                      |                             |                                |  |  |  |  |
|    | (A) 1, 2 and 3  | (B) 1 and 2 only  | (C) 2 and 3 only            | (D) 1 and 3 only               |  |  |  |  |
| 2. | In order to obtain re   | petitive pulses of unequal                              | mark space durations o      | ne can use:                    |  |  |  |  |
|    | (1) A voltage comp  | arator fed with a triangula                             | r wave signal and a dc      | voltage.                       |  |  |  |  |
|    | (2) An astable mult   | i-vibrator  |                             |                                |  |  |  |  |
|    | (3) A mono-stable r   | nulti-vibrator fed with a s                             | quare wave input.           |                                |  |  |  |  |
|    | (A) 1 and 3   | (B) 1 and 2 only  | (C) 2 and 3 only            | (D) 1, 2 and 3                 |  |  |  |  |
| 3. | A small signal voltage amplifier in common emitter configuration was working satisfactorily Suddenly its emitter-bypass capacitor ( $C_E$ ) got disconnected. Its:                            |   |                             |                                |  |  |  |  |
|    | (1) Voltage gain wi   | ll decrease   | (2) Voltage gain w          | (2) Voltage gain will increase |  |  |  |  |
|    | (3) Bandwidth will  | decrease  | (4) Bandwidth will increase |                                |  |  |  |  |
|    | (A) 1 and 4 only  | (B) 2 and 3 only  | (C) 3 and 4 only            | (D) 1,2, 3 and 4               |  |  |  |  |
| 4. | A series resonant circuit has a resistance of 47 $\Omega$ , inductance of 2H and capacitance of 2 $\mu$ F with a supply voltage of 10 volts. The current through the circuit at resonance is: |   |                             |                                |  |  |  |  |
|    | (A) 0.833 amp   | (B) 0.212 amp   | (C) 0.196 amp               | (D) 0 amp                      |  |  |  |  |
| 5. | Once an SCR is turned on, it remains so until the anode current goes below:   |   |                             |                                |  |  |  |  |
|    | (A) Trigger current   |   | (B) Break over cur          | (B) Break over current         |  |  |  |  |
|    | (C) Threshold curren  | nt  | (D) Holding currer          | nt                             |  |  |  |  |
| 6. | In a PLL  |   |                             |                                |  |  |  |  |
|    | (A) Capture range –   | (A) Capture range – Lock range ≠ Free running frequency |                             |                                |  |  |  |  |
|    | (B) Capture range –   | (B) Capture range – Lock range = Free running frequency |                             |                                |  |  |  |  |
|    | (C) Capture range >   | (C) Capture range > Lock range                          |                             |                                |  |  |  |  |
|    | (D) Capture range <   | Lock range  |                             |                                |  |  |  |  |
| 7. | The main advantage  | of active filter is that it ca                          | an be realized without u    | sing:                          |  |  |  |  |
|    | (A) Transistor  | (B) Capacitor   | (C) Resistor                | (D) Inductor                   |  |  |  |  |

GATEFORUM Engineering Success

8. For the transistor circuit shown in the figure, when:

- (1)  $V_{in} > 0$ , transistor is OFF
- (2)  $V_{in} \le 0$ , transistor is OFF
- (3)  $I_B > \frac{I_C}{h_{FE}}$ , transistor is ON
- (4)  $I_B \le \frac{I_C}{h_{FE}}$ , transistor is ON
- (A) 1,2,3 and 4

(B) 1 and 2 only

(C) 2 and 3 only

- (D) 3 and 4 only
- 9. The logic function  $f = \overline{x \cdot y} + \overline{x} \cdot y$  is the same as:
  - (A)  $f = (x + y)(\overline{x} + \overline{y})$

(B)  $f = \overline{\left(\overline{x} + \overline{y}\right)\left(x + y\right)}$ 

(C)  $f = \overline{(x \times y)} (\overline{x} \times \overline{y})$ 

- (D) None of these
- 10. If the Boolean expression  $\overline{P}Q + QR + PR$  is minimized, the expression becomes:
  - $(A)\overline{P}Q+QR$

(B)  $\overline{P}Q + PR$ 

(C)QR + PR

- (D)  $\overline{P}Q + QR + PR$
- 11. Match List I with List II and select the correct answer using the code given below the lists:

|     | List I        | Lis        | t II      |                   |                   |
|-----|---------------|------------|-----------|-------------------|-------------------|
| P   | AND gate      | 1          | Boolean o | complementation   |                   |

| R   | NOT gate      | 3          | Boolean r | multiplication    |                   |
| (A) | P-3, Q-1, R-2 | (B) P-1, 0 | Q-2, R-3  | (C) P-3, Q-2, R-1 | (D) P-1, Q-3, R-2 |

- 12. Which of the following are universal gates?
  - (1) AND
- (2) NAND
- (3) OR
- (4) NOR
- (5) NOT

(A) 1,2,3,4 and 5

(B) 1, 3 and 4 only

(C) 2,3 and 5 only

- (D) 2 and 4 only
- 13. CMOS logic families are associated with:
  - (1) Low power dissipation (2) High noise immunity
  - (3) Low fan out
  - (4) Comparatively high logic voltage swing
  - (A) 1,2 and 4 only

(B) 1,2 and 3 only

(C) 2,3 and 4 only

(D) 1,2, 3 and 4

P TTL Low power consumption

Q **ECL**  High speed

**CMOS** R

- Low propagation delay
- (A) P-1, Q-3, R-2
- (B) P-2, Q-3, R-1
- (C) P-1, Q-2, R-3
- (D) P-2, Q-1, R-3

15. Match List II with List I

### List I

#### List II

- P DCTL
- 1 Multiple collectors

Q ECL

2 Current hogging

 $R I^2L$ 

- 3 High speed
- (A) P-2, Q-3, R-1
- (B) P-1, Q-3, R-2
- (C) P-2, Q-1, R-3
- (D) P-1, Q-2, R-3

16. The logic function;

Out = ab + bc + ca defines:

- (1) The output of a 3-inputs XOR gate
- (2) The output of a 3-inputs majority gate
- (3) The sum output of a full adder
- (4) The carry output of a full adder
- (A) 1 and 2
- (B) 2 and 3
- (C) 3 and 4
- (D) 2 and 4

17. Consider the following gate network:

Which one of the following gates is redundant?

- (A) Gate No.1
- (B) Gate No.2
- (C) Gate No.3
- (B) Gate No.4

- 18. In standard TTL, the 'totem pole' refers to
  - (A) Multi-emitter input stage

- (B) The phase splitter
- (C) Open collector output stage
- (D) The output buffer
- 19. In a JK flip-flop we have  $J = \overline{Q}$  and K = 1. Assuming the flip-flop was initially cleared and then clocked for 6 pulses, the sequence at the Q output will be:

- (A) 010000
- (B) 011001
- (C) 010010
- (D) 010101
- 20. Which one of the following circuits converts a JK F/F to a T F/F?

- 21. A 4-bit ripple counter consisting of flip-flops that each have a propagation delay of 12ns from clock to Q output. For the counter to recycle from 1111 to 0000, it takes a total of:
  - (A) 12ns
- (B) 24ns
- (C) 48ns
- (D) 26ns
- 22. An eight-bit binary ripple UP counter with a modulus of 256 is holding the count 01111111. What will be the count after 135 clock pulses?
  - (A) 0000 0101
- (B) 1111 1001
- (C) 0000 0110
- (D) 0000 0111

(A) 3

23. The shift register shown in the figure is initially loaded with the bit pattern 1010. Subsequently the shift register is clocked, and with each clock pulse the pattern gets shifted by one bit position to the right. With each shift, the bit at the serial input is pushed to the left most position (MSB). After how many clock pulses will the content of the shift register become 1010 again?

24. What is the name of the circuit shown below?

(A) Miller sweep

(B) Bootstrap sweep

(C) Schmitt trigger

- (D) Triangular wave generator
- 25. Dual–slope integration type Analog-to-Digital converters provide:
  - (1) Higher speeds compared to all other types of A/D converters
  - (2) Very good accuracy without putting extreme requirements on component stability
  - (3) Good rejection of power supply hum
  - (4) Better resolution compared to all other types of A/D converters for the same number of bits
  - (A) 2 and 3 only
- (B) 3 and 4 only
- (C) 4 and 1 only
- (D) 1, 2, 3 and 4

26. What is the steady-state value of the unit step response of a closed-loop control system shown in figure?

- (A) 0.5
- (B) 0

- (C) 2
- (D) ∞
- 27. What is the unit impulse response of the system shown in figure for  $t \ge 0$ ?

- $(A)1 + e^{-t}$
- $(B)1-e^{-t}$
- $(C)e^{-t}$
- (D)  $-e^{-t}$
- What are the gain and phase angle of a system having the transfer function G(s) = (s + 1) at a frequency of 1 rad/sec?
  - (A) 0.41 and 0°
- (B) 1.41 and 45°
- (C) 1.41 and -45°
- (D) 2.41 and 90°
- 29. The block diagram of a closed-loop control system is given in figure. What is the type of this system?

- (A) Zero
- (B) One
- (C) Two
- (D) Three
- 30. Given the differential equation model of a physical system, determine the time constant of the system:

$$40\frac{\mathrm{d}x}{\mathrm{d}t} + 2x = f\left(t\right)$$

- (A) 10
- (B) 20

- (C) 1/10
- (D) 4

- 31. Consider a second order all-pole transfer function model, if the desired settling time (5%) is 0.60 sec and the desired damping ratio 0.707, where should the poles be located in s-plane.
  - (A)  $5 \pm i4\sqrt{2}$
- (B)  $5 \pm i5$
- (C)  $4 \pm i5\sqrt{2}$
- (D)  $-4 \pm i7$
- 32. The characteristic equation of control system is given as:

$$s^4 + 8s^3 + 24s^2 - 32s + K = 0$$

What is the value of K for which the system is unstable?

- (A) 10
- (B) 20
- (C) 60
- (D) 100
- 33. Where are the  $K \pm \infty$  points on the root loci of the characteristic equation of the closed loop control system located at?
  - (A) poles of G(s) H(s)
  - (B) zeroes of G(s) H(s)
  - (C) both zeroes and poles of G(s) H(s)
  - (D) neither at zeroes nor at poles of G(s) H(s)
- 34. The characteristic equation of control system is given as:

$$1 + \frac{K(s+1)}{s(s+4)(s^2 + 2s + 2)} = 0$$

For large values of s, the root loci for  $K \ge 0$  are asymptotic to asymptotes, where do the asymptotes intersect on the real axis?

- (A)  $\frac{5}{3}$
- (B)  $\frac{2}{3}$  (C)  $-\frac{5}{3}$
- 35. Where are the K = 0 points on the root loci of the characteristic equation of the closed loop control system located at?
  - (A) Zeroes of G(s) H(s)
  - (B) Poles of G(s) H(s)
  - (C) Both Zeroes and Poles of G(s) H(s)
  - (D) Neither at zeroes not at poles of G(s) H(s)
- 36. Given the root locus of a system

$$G(s) = \frac{4k}{(s+1)(s+3)}$$

What will be the gain for obtaining the damping ratio 0.707?

- (A) 1/4
- (B) 5/4
- (C) -3/4
- (D) 11/4
- 37. The number of individual loci in a root locus plot is equal to:
  - (A) The number of open loop poles
  - (B) The number of open loop zeroes
  - (C) The difference of the number of open loop poles and the number of open loop zeroes
  - (D) The number of open loop poles or zeroes whichever is greater
- 38. An electrical system transfer function has a pole at s = -2 and a zero at s = -1 with system gain 10. For sinusoidal current excitation, voltage response of the system:
  - (A) Is zero

(B) Is in phase with the current

(C) Leads the current

(D) Lags behind the current

39. For the Bode plot of the system

$$G(s) = \frac{10}{0.66s^2 + 2.33s + 1}$$
 the corner frequencies are

- (A) 0.66 and 0.33
- (B) 0.22 and 2.00
- (C) 0.30 and 2.33
- (D) 0.50 and 3.00
- 40. If the gain margin of a system in decibels is negative, the system is:
  - (A) Stable
  - (B) Marginally stable
  - (C) Unstable
  - (D) Could be stable or unstable or marginally stable
- 41. An electrical network is shown in figure. What type of compensator is this?

Input = 
$$E_i(s)$$

$$C \longrightarrow R_1$$

$$R_2 \iff E_0(s) = Outpu$$

- (A) Phase lead compensator
- (B) Phase lag compensator
- (C) Lag-lead compensator
- (D) Neither phase lead not phase lag compensator

42. The circuit diagram of an electrical network is given in figure. What type of compensator is this?

- (A) Phase lag compensator
- (B) Phase lead compensator
- (C) Lag-lead compensator
- (D) Neither phase lag nor phase lead compensator

43. What is the transfer function of a phase lag compensator? The values of  $\alpha$  and  $\tau$  are given as  $\alpha > 1$  and  $\tau > 0$ :

$$(A) \ \frac{1}{\alpha} \frac{\left(s + \frac{1}{\tau}\right)}{\left(s + \frac{1}{\alpha\tau}\right)} \qquad (B) \ \frac{1}{\alpha} \frac{\left(s - \frac{1}{\tau}\right)}{\left(s - \frac{1}{\alpha\tau}\right)} \qquad (C) \ \frac{1}{\alpha} \frac{\left(s + \frac{1}{\tau}\right)}{\left(s - \frac{1}{\alpha\tau}\right)} \qquad (D) \ \frac{1}{\alpha} \frac{\left(s - \frac{1}{\tau}\right)}{\left(s + \frac{1}{\alpha\tau}\right)}$$

(B) 
$$\frac{1}{\alpha} \frac{\left(s - \frac{1}{\tau}\right)}{\left(s - \frac{1}{\alpha\tau}\right)}$$

(C) 
$$\frac{1}{\alpha} \frac{\left(s + \frac{1}{\tau}\right)}{\left(s - \frac{1}{\alpha \tau}\right)}$$

(D) 
$$\frac{1}{\alpha} \frac{\left(s - \frac{1}{\tau}\right)}{\left(s + \frac{1}{\alpha \tau}\right)}$$

44. What is the transfer function of a phase lead compensator? The values of  $\beta$  and  $\tau$  are given as  $\beta < 1$  and  $\tau > 0$ :

(A) 
$$\frac{\beta(\tau s + 1)}{(\beta \tau s + 1)}$$

$$(A) \ \frac{\beta \left(\tau s+1\right)}{\left(\beta \tau s+1\right)} \qquad \qquad (B) \ \frac{\beta \left(\beta \tau s+1\right)}{\left(\tau s+1\right)} \qquad \qquad (C) \ \frac{\beta \left(\beta \tau s-1\right)}{\left(\tau s+1\right)} \qquad \qquad (D) \ \frac{\beta \left(\beta \tau s-1\right)}{\left(\tau s-1\right)}$$

(C) 
$$\frac{\beta(\beta\tau s-1)}{(\tau s+1)}$$

(D) 
$$\frac{\beta(\beta\tau s - 1)}{(\tau s - 1)}$$

45. The circuit diagram of a controller is given in figure. What type of controller is this?

(A) Derivative

(B) Integral

(C) Proportional

(D) Proportional + Integral

46. The circuit diagram of a controller is given in figure. What type of controller is this?

(A) Proportional

(B) Proportional + Derivative

- (C) Integral

- (D) Proportional + Integral
- 47. Discrete source  $S_1$  has 4 equiprobable symbols while discrete source  $S_2$  has 16 equiprobable symbols. When the entropy of these two sources is compared, entropy of:
  - (A)  $S_1$  is greater than  $S_2$
  - (B)  $S_1$  is less than  $S_2$
  - (C)  $S_1$  is equal than  $S_2$
  - (D) Depends on rate of symbols/second
- 48. What bandwidth is needed for an FM signal that has a peak deviation of  $\pm 3$  kHz and handles audio signals from 200 Hz to 5 kHz?
  - (A) 6 kHz

- (B) 16 kHz
- (C) 10 kHz
- (D) 9.6 kHz
- 49. The main factor that determines the accuracy of a reconstructed PCM signal is the:
  - (A) Signal bandwidth
  - (B) Pulse repletion rate
  - (C) Pulse amplitude
  - (D) Number of bits used for quantization
- 50. Match List II with List I

| List I |                    |   | List II                |  |  |

<sup>◆</sup> India's No.1 institute for GATE Training ◆ 1 Lakh+ Students trained till date ◆ 65+ Centers across India

51. Figure shows a block diagram of a system to recover a sampled signal shown as input.

Blocks A and B can be respectively:

- (A) Zero order hold and low pass filter
- (B) Multiplier and high pass filter
- (C) Envelop detector and sampler
- (D) Tuned circuit and mixer
- 52. Which one of the following scheme is a digital modulation technique?
  - (A) Pulse code modulation

(B) On-off keying

(C) Pulse width modulation

(D) Delta modulation

- 53. Consider the following codes:
  - (1) Hamming code
  - (2) Huffman code
  - (3) Shannon-Fano code
  - (4) Convolutional code

Which of these are source codes?

- (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 3 and 4 only
- (D) 1,2,3 and 4
- 54. PAM signals are constructed by using a low pass filter of pass band slightly greater than base band to avoid aliasing. This avoids distortion:
  - (A) True for flat top pulses
  - (B) True is low pass filter has sharp cut-off
  - (C) Flat top pulses introduce envelope delay
  - (D) Flat top pulses introduce amplitude distortion and delay
- 55. Consider the following advantages of optical fiber-cables:
  - (1) Small diameter
  - (2) Immunity to cross talk and electromagnetic interference
  - (3) Laser and LED modulation methods lend themselves ideally to digital operation

Which of these advantages are correct?

- (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 3 and 1 only
- (D) 1,2 and 3
- 56. Polarization mode dispersion (PMD) is mainly observed in:
  - (A) Multiple step-index fiber

- (B) Single mode fiber
- (c) Multimode graded-index fiber
- (D) Plastic fiber
- 57. A high fidelity audio amplifier (MPEG) has frequency response as shown in figure. This response can be improved by which equalizer shown with frequency response E(f) below?

►f (Hz)

58. Due to the phenomenon of refraction of radio waves in the atmosphere, which of the following effect is observed?

f (Hz)

(A) Radio horizon distance is more than the optical horizon distance.

14k

- (B) Radio horizon distance is less than the optical horizon distance.
- (C) It all depends upon the weather conditions. Any one of the above choice may be true depending upon type of weather.
- (D) Radio horizon and optical horizon are always same because both radio waves and optical waves are electromagnetic in nature.
- 59. Micro-wave signals propagating along the curvature of earth is known as
  - (A) Farady effect

(B) Ionosphere reflection

50

(C) Dueting

(D) Tropospheric scatter

- 60. In ship to ship communication, the problem of fading can be overcome by using
  - (A) Frequency diversity

(B) Space diversity

(C) More directional antenna

(D) A broad band antenna

- 61. Microwave frequencies are used for communication with deep space probes primarily because they do not suffer
  - (A) Refraction by ionosphere

(B) Attenuation in space

(C) Velocity distortion and phase distortion

(D) Fading

- 90. Given below are some applications. Choosing from the options, pick the one that allocates a suitable data structure for implementing these applications:
  - (1) Representation of a sparse matrix
  - (2) Fast access to any item from a set of data
  - (3) Convert infix expressions to postfix expression
  - (4) Storing the terms of a long polynomial with arbitrary number of terms
  - (A) Linked list, array listed list and stack
  - (B) Stack, array and stack listed list
  - (C) Array array, tree and stack
  - (D) Linked list, array and stack listed list
- 91. Which one of the following operators of high level language is used to eliminate the run-time cost of redundant address calculations?
  - (A) Arithmetic
- (B) Assignment
- (C) Logical
- (D) Relational
- 92. How many passes does a Bubble sort algorithm require for sorting a given list of 'n' items?
  - $(A) n^2$

- (B)  $\sqrt{n}$
- (C) n + 1
- (D) n-1
- 93. Which of the following instruction processing activity of the CPU can be pipelined?
  - (1) Instruction encoding (2) Operand loading
- (3) Operand storing

- (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 1 and 3 only
- (D) 1, 2 and 3
- 94. Which of the following are the problems with using Millions instructions per second (MIPS) as a measure for comparing computer performance?
  - (1) It does not take into account the capabilities of the instructions.
  - (2) MIPS can vary inversely with performance
  - (3) MIPS varies between programs on the same computer.
  - (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 1 and 3 only
- (D) 1,2 and 3
- 95. The speed gained by an 'n' segment pipeline executing 'm' tasks is:
- (B)  $\frac{mn}{(n+m-1)}$  (C)  $\frac{n+m}{(mn-1)}$  (D)  $\frac{n+m}{(mn+1)}$
- 96. In writing the micro-program, there are two situations in which a field of the micro instruction can be kept blank when it:
  - (1) Controls a functional unit
  - (2) Causes state to be written
  - (3) Specifies the control of a multiplexer
  - (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 1 and 3 only
- (D) 1, 2 and 3

97. Match List II with List I

|   | List I        |   | List II        |
|---|---------------|---|----------------|
| P | DMA I/O       | 1 | High speed RAM |
| Q | Cache         | 2 | Disk           |
| R | Interrupt I/O | 3 | Printer        |
|   |               |   |                |

98. If 8085 microprocessor adds 87 H and 79 H. the flags will be

(A) 
$$S=1, Z=0, AC=0$$
 and  $Cy=1$  (B)  $S=0, Z=0, AC=1$  and  $Cy=0$  (C)  $S=1, Z=1, AC=1$  and  $Cy=1$  (D)  $S=0, Z=1, AC=1$  and  $Cy=1$ 

99. Which one of the following control bits of 8086 flag register is used to put the 8086 in single step mode?

- (A) DF (B) IF (C) TF (D) ZF
- 100. As compared to 16 bit microprocessor, 8 bit microprocessors are limited in:
  - (1) Speed (2) Directly addressable memory
  - (3) Data handling capability
  - (A) 1 and 2 only (B) 2 and 3 only (C) 1 and 3 only (D) 1, 2 and 3

Each of the next Twenty (20) items consists of two statements. One labelled as the "Assertion (A) and the other as "Reason (R)". You are to examine these two statements carefully and select the answer to these items using the codes given below.

#### Codes:

- (A) Both A and R are individually true and R is the correct explanation of A
- (B) Both A and R are individually true but R is NOT the correct explanation of A
- (C) A is true but R is false
- (D) A is false but R is true
- 101. **Assertion (A)** : For producing radiation patterns with predetermined characteristics like beam width, side-lobe levels etc phased array antennas are widely used in antenna technology

**Reason (R)**: In phased array antenna system the resultant radiation pattern is formed by the superposition of electromagnetic waves radiated from various antenna elements which maintain specific, predetermined phase conditions.

102. **Assertion (A)** : A memory module presents a specific memory interface to the processor or other unit that references memory.

Reason (R) : Memory module contains buffer registers for the address and data

<sup>→</sup> India's No.1 institute for GATE Training → 1 Lakh+ Students trained till date → 65+ Centers across India

| 103. | Assertion (A) Reason (R)    | : | A unique property of $\mathrm{TM}_{\mathrm{on}}$ modes in circular waveguides is rapid decrease in attenuation with increasing frequency. The circular waveguides find application in long low-loss communication.  |
|------|-----------------------------|---|---|
| 104. | Assertion (A)<br>Reason (R) | : | A passive satellite only reflects back signals.  Communication satellite is a repeater between many transmitting stations and many receiving stations.  |
| 105. | Assertion (A)<br>Reason (R) | : | A de-multiplexer cannot be used as a decoder.  A de- multiplexer selects one of many outputs, whereas a decoder selects an output corresponding to the coded input  |
| 106. | Assertion (A)<br>Reason (R) | : | A look- ahead carry adder is a fast adder.  A parallel carry adder generates sum digits directly from the input digits.   |
| 107. | Assertion (A)<br>Reason (R) | : | A tunnel diode has an extremely thin depletion layer.  Tunnelling phenomenon occurs when a very heavily doped junction is reverse biased.   |
| 108. | Assertion (A) Reason (R)    | : | The basic group in an FDM system occupies a band 60kHz to 108 kHz in frequency. The voice channels in FDM are band limited to 4 kHz and carrier frequencies $f_c = 60 + 4 \times \text{nkHz}$ are used for 12 channels in the basic group.  |
| 109. | Assertion (A) Reason (R)    | : | The frequency stability of an oscillator improves as $\frac{d\theta}{d\omega}$ increases, where $\theta$ refers to the phase angle of the loop gain. For sustained oscillation to occur in an oscillator circuit the loop shift should be $0^{\circ}$ or $2n\pi$ where n is an integer. |
| 110. | Assertion (A) Reason (R)    | : | The power handling capacity of a receiver antenna could be very low compared to identical transmitting antenna.  A transmitter antenna has to radiate a large power. The receiver antenna will have to deal only with a very small fraction of the radiated power from the transmitter. |
| 111. | Assertion (A) Reason (R)    | : | Most high level programming languages include a notion of 'type' for expression.  Type provides implicit context for many operations and it limits the set of operation that may be performed in a semantically valid program.  |

<sup>♦</sup> India's No.1 institute for GATE Training ♦ 1 Lakh+ Students trained till date ♦ 65+ Centers across India

EC- Objective Paper-II

**IES-2011** 

| 112. | Assertion (A) | : | The activity reading from or writing into one of the stand alone register and into register file is same.                           |
|------|---------------|---|---|
|      | Reason (R)    | : | The register file has additional control and access overhead compared to the single stand alone register.                           |
| 113. | Assertion (A) | : | Processor level design is heavily based on the use of prototype structures.   |
|      | Reason (R)    | : | A prototype design is selected and modified to meet the given performance specifications.   |
| 114. | Assertion (A) | : | The low-level control of an I/O device is easier at hardware level.   |
|      | Reason (R)    | : | It requires managing a set of concurrent events.  |
| 115. | Assertion (A) | : | Workstations are often used in engineering applications, especially for interactive design work.                                    |
|      | Reason (R)    | : | Work stations with graphics I/O capability have a computational power that is significantly higher than that of personal computers. |
| 116. | Assertion (A) | : | At microwave frequencies, PIN diode can be used as fast switch.   |
|      | Reason (R)    | : | PIN diode has very high resistance when reverse biased and very low resistances when forward biased.                                |
| 117. | Assertion (A) | : | Microwave link repeaters are typically about 50kms apart.   |
|      | Reason (R)    | : | Curvature effect of Earth makes a limitation for distance between two microwaves repeaters.   |
| 118. | Assertion (A) | : | A geostationary orbit is same as a geosynchronous orbit.  |
|      | Reason (R)    | : | A geostationary orbit does not necessarily lie in equatorial plane.   |
| 119. | Assertion (A) | : | The system function $H(s) = \frac{z^3 + 2z^2 + z}{z^2 + \frac{1}{4}z + \frac{1}{8}}$ is not causal                                  |
|      | Reason (R)    | : | If the numerator of $H(s)$ is of lower order than the denominator, the system may be causal   |
| 120. | Assertion (A) | : | Emitter – coupled logic (ECL) provides high speed logic gates.  |
|      | Reason (R)    | : | ECL prevents adverse effects of diffusion capacitance as it does not operate fully saturated or cut off.                            |
